

Bellwork:

Get your homework out and be ready to grade it.

REMEMBER: NO LATE WORK!!!

Chapter 6.5: Graph Square Root and Cube Root Functions

- Helps to the know the parent functions and how they relate.

$$y = a\sqrt{x-h}+k \quad y = a\sqrt[3]{x-h}+k$$

Annotations for the square root function:
 - Green arrow pointing to a : upside down? Vertical stretch/shrink
 - Red arrow pointing to k : up/down
 - Blue arrow pointing to h : opp of h moves L/R

Parent functions!!!!

$$y = \sqrt{x}$$

$$y = x^2$$

$$D: x \geq 0$$

$$R: y \geq 0$$

$$\in$$

$$D: x \in \mathbb{R}$$

$$R: y \in \mathbb{R}$$

$$y = \sqrt[3]{x}$$

$$y = x^3$$

ex. Graph and give the domain and range.
Compare to the parent function.

$$y = \frac{1}{2}\sqrt{x}$$

shrink
by $\frac{1}{2}$

ex. Graph, give domain and range, compare to the parent function.

$$y = -3\sqrt[3]{x}$$

upside down
stretch by 3

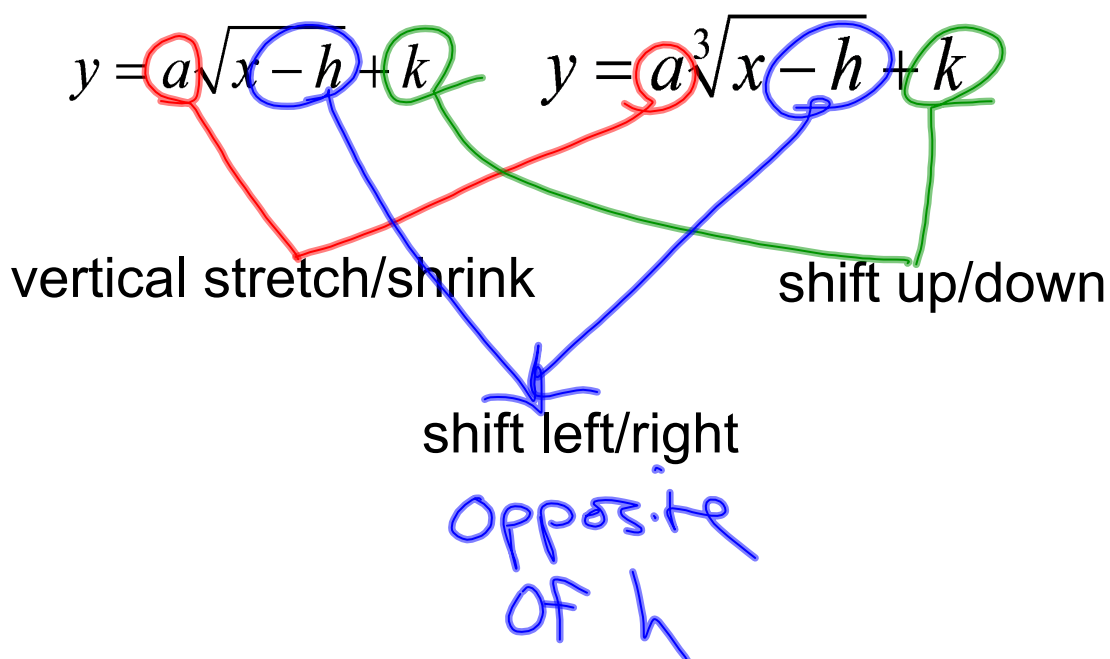

ex. The period of a pendulum is the time the pendulum takes to complete one back and forth swing. The period T (in sec.) can be modeled by $T = 1.11\sqrt{l}$ where l is the pendulum's length (in ft).

- Graph the model *graph $y = 1.11\sqrt{x}$*
- How long is a pendulum with a period of 3 sec?

solve: $3 = 1.11\sqrt{x}$

$x \approx 7.3 \text{ ft}$

Translating Radical Functions:

ex. graph and give domain/range. Compare to parent function.

ex. graph, give domain/range, compare to parent function.

$$y = \sqrt[3]{x+4} - 1$$

Stretch by 3
down 1
left + 4

D: $x \in \mathbb{R}$
R: $y \in \mathbb{R}$
