

Bellwork:

Name as many ideas, definitions, theorems, etc. that you have learned so far in Geometry.

Bellwork:

Solve with reasons:

$$\begin{array}{l}
 60 = -3(8x - 4) \text{ given} \\
 60 = -24x + 12 \text{ distributive} \\
 -12 \quad -12 \text{ subtraction of} \\
 \hline
 48 = -24x \text{ division of} \\
 -24 \quad -24 \\
 \hline
 -2 = x
 \end{array}$$

Chapter 2.7: Prove Angle Pair Relationships

Remember for a proof you need.....

- a given statement(s)
- a prove statement
- statements and reasons

a couple ways to outline a proof

Flow chart

List

- Given: Prove:
- Statement Reason
- Thus, Proven

Two column

Given:

Prove:

Statement	Reason
1	1. Given
2	2

Right angles are congruent.

Given: $\angle 1 + \angle 2$ are right \angle 's

Prove: $\angle 1 \cong \angle 2$

$\angle 1 + \angle 2$ are rt \angle 's	given
$\angle 1 = 90^\circ, \angle 2 = 90^\circ$	def of rt \angle 's
$\angle 1 = \angle 2$	Transitive
$\angle 1 \cong \angle 2$	def of \cong

Given: $\overline{AB} \perp \overline{BC}, \overline{BC} \perp \overline{CD}$

Prove: $\angle B \cong \angle C$

$\overline{AB} \perp \overline{BC}, \overline{BC} \perp \overline{CD}$	given
$\angle B$ is rt, $\angle C$ rt. \angle	def of \perp
$\angle B \cong \angle C$	rt. \angle axiom

Congruent Complementary Theorem:

- If two angles are complementary to the same angle, then they are congruent.

Why?????

$$\begin{aligned} \overset{a}{\angle 1} + \overset{b}{\angle 2} &= 90 \\ \overset{c}{\angle 2} + \angle 3 &= 90 \end{aligned} \quad \left. \vphantom{\begin{aligned} \overset{a}{\angle 1} + \overset{b}{\angle 2} &= 90 \\ \overset{c}{\angle 2} + \angle 3 &= 90 \end{aligned}} \right\} \text{Def of Comp. } \angle\text{'s}$$

$$\angle 1 + \angle 2 = \angle 2 + \angle 3 \rightarrow \text{Transitive}$$

$$\angle 1 = \angle 3 \rightarrow \text{Sub prop of } =$$

$$\angle 1 \cong \angle 3 \rightarrow \text{def of } \cong$$

Get with a partner and compare and finish the proof.

Prove: if two angles are supplementary to the same angle then they are congruent.

$$\begin{aligned} \angle 1 + \angle 2 & \\ \angle 2 + \angle 3 & \end{aligned} \left. \vphantom{\begin{aligned} \angle 1 + \angle 2 & \\ \angle 2 + \angle 3 & \end{aligned}} \right\} \text{supplementary } \rightarrow \text{given}$$

$$\begin{aligned} \angle 1 + \angle 2 &= 180 \\ \angle 2 + \angle 3 &= 180 \end{aligned} \left. \vphantom{\begin{aligned} \angle 1 + \angle 2 &= 180 \\ \angle 2 + \angle 3 &= 180 \end{aligned}} \right\} \rightarrow \text{def of supp.}$$

$$\angle 1 + \angle 2 = \angle 2 + \angle 3 \rightarrow \text{transitive}$$

$$\angle 1 = \angle 3 \rightarrow \text{sub prop of } =$$

$$\angle 1 \cong \angle 3 \rightarrow \text{def of } \cong$$

Axiom 12: If two angles form a linear pair, then they are supplementary

Prove Vertical Angles Congruent:

given $\angle A$ + $\angle C$ are vertical
 prove $\angle A \cong \angle C$

$\angle A + \angle B$	suppl	linear pair
$\angle B + \angle C$	suppl	linear pair
$\angle A \cong \angle C$	\cong	Suppl \angle thm

ex. How do I find x? what is x?

$$32 + 3x + 1 = 180$$

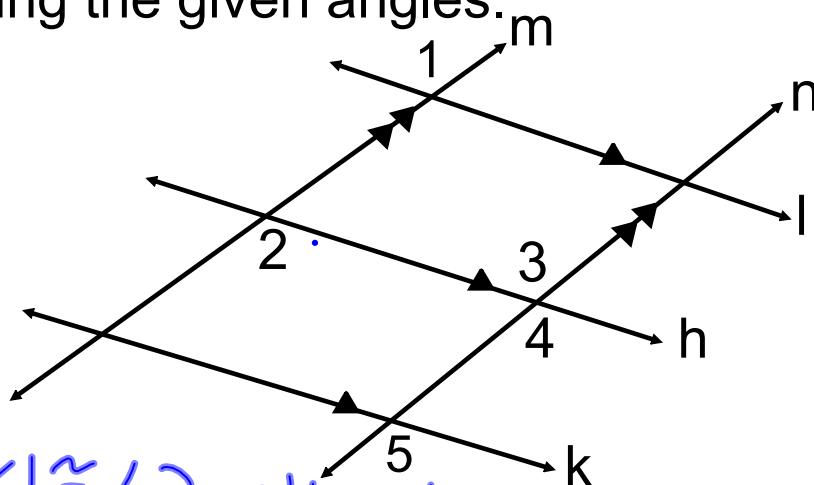

$$3x + 33 = 180$$

$$\begin{array}{r} -33 \\ -33 \end{array}$$

$$x = 49$$

$$\frac{3x = 147}{3} \quad \frac{147}{3}$$

Prove that the angles 1 and 5 are congruent using the given angles.

$$\angle 1 \cong \angle 2 \text{ alt. ext}$$

$$\angle 2 \cong \angle 3 \text{ alt int}$$

$$\angle 3 \cong \angle 4 \text{ vert } \angle \text{'s}$$

$$\angle 4 \cong \angle 5 \text{ corres.}$$
