Art Virtual Learning

3rd Grade Radial Symmetry

April 15, 2020
3rd Grade Art
Lesson: April 15, 2020

Learning Target:
Students will identify and use symmetrical balance
Student artists use their hands, minds, and hearts.

</table>
| I use my hands to create art.  
I explore media, use tools, take care of supplies and studio space. | I generate ideas.  
I reflect on my work and the next steps.  
I interact with other artists. | I look at the world around me.  
I persist when I struggle with problems.  
I express my thoughts with art. |
| **Studio Habits of Mind** | **Envision**  
**Reflect**  
**Understand the Art World** | **Observe**  
**Engage and Persist**  
**Express** |
Background: Shape is a review lesson from 2nd Grade

- Students will learn to identify and use a pattern by repeating a single shape, line, or color in Kindergarten.
- Students will learn to identify and create an alternating pattern in 1st grade.
- Students will learn to identify and create complex patterns in 2nd grade.
- Students will learn to identify and use symmetrical balance in 3rd grade.

Let’s Get Started:

Watch this short video

Radial Balance
Now open Splash and Bubbles Sand Art to practice creating.

Splash and Bubbles Sand Art
What is radial symmetry?
A type of formal balance in which objects radiate around a central point and has more than one line of symmetry.

Remember this line is the line of symmetry.
Practice #1:
Do you see the radial symmetry?

Think back to the video:
Radial Symmetry is objects or shapes that radiate around a central point
Practice #1: Answer

Think back to the video:
Radial Symmetry is objects or shapes that radiate around a central point.
Practice #2:
Do you see the radial symmetry?

Think back to the video:
Radial Symmetry is objects or shapes that radiate around a central point.
Think back to the video:
Radial Symmetry is objects or shapes that radiate around a central point.
Practice #3:
Do you see the radial symmetry?

Think back to the video:
Radial Symmetry is objects or shapes that radiate around a central point.
Think back to the video:
Radial Symmetry is objects or shapes that radiate around a central point
Practice on your own:
Gather your supplies:
Paper towel or toilet paper rolls, pencil, scissors, glue (tape or stapler), clothespins and/or paperclips

1. What does radial symmetry look like?

2. Think about what it looks like. Notice how the designs circle around the middle point.

3. See step by step directions on the next slide.
Gather your supplies: scissors, clothespins or paperclips, glue (tape or stapler), paper towel or toilet paper tubes.

Start by flattening your tubes and cutting them. About 1 inch pieces.
Different ways to alter your pieces for your radial design.

- Leaf shape
- Heart shape
- Scroll shape
- Simple curl
Begin by laying out your design and deciding how you want it to look.

Start with the middle of your design. Add glue (tape or staple) then hold it together with a clothespin or a paperclip.
Here is my design with many paper clips and clothespins.

When the glue dries remove all your clips. This could easily be painted or hung on the wall just the way it is. Have fun creating.
Extra Practice 1:
Make a radial design out of found items around the house.

Be creative!
Extra Practice 2:
Watch the video to make a radial symmetry design

Materials: paper, crayons or markers, pencil, scissors

[Art with Trista - Radial Symmetry]
Self Check:
   Go show someone in your house your artwork.

1. Was this lesson?
   - easy
   - just right
   - hard

2. Find 4 items in your house that have radial symmetry.
