

6th Grade Science Day 11

Students will be able to design a procedure for an experiment.

Directions:

1. Watch the [video](#) showing different magnetism experiments.
2. Then, choose one experiment from the video to focus on the questions below. (Write your answers on notebook paper):
 1. List the objects used in the experiment.
 2. Using at least 3 steps construct a procedure for the experiment as if you were explaining to someone else how to do it.
 3. What observations did you make? Why did it work?
