**Algebra 1 S1**

**Rational Exponents**

May 15 , 2020

Algebra 1 S1  
Lesson: May 15, 2020

**Objective/Learning Target:**

**Students will find equivalent expressions involving rational exponents.**

# Brainstarter

"Remember Take  
Notes"

# Let's Get Started

[Watch the video](#)

Let's start with writing  
expressions in radical form!

Remember numerator  
becomes power!  
Denominator becomes  
index!

$$7^{\frac{1}{3}}$$

$$\sqrt[3]{7}$$

Now Let's try a more complex exponential problem.

$$(5x)^{-\frac{5}{4}}$$

First flip the expression because of the negative exponent!

Now write the bottom in radical form

Leave the 1 in the numerator alone!

$$\frac{1}{5x^{\frac{5}{2}}}$$

**You got it!**

**Remember what  
part of fraction  
is power and  
what part is  
index!**

$$\frac{1}{\sqrt[4]{5 \times 5}}$$

Let's go the other direction  
from radical to exponential  
form.

$$\sqrt{10^3}$$

Remember that this  
means the square  
root!

The power becomes the numerator and the index becomes the denominator.

Just work backwards and make a fraction for the exponent!

$$10^{3/2}$$

Now a more complex problem!

$$\frac{1}{(\sqrt{3k})^5}$$

Work inside  
parentheses first!

Next step is to make this a whole number expression!

$$\frac{1}{(3k)^{\frac{5}{2}}}$$

Flip the fraction and make it a negative exponent!

I think you've got it!

(3K) <sup>2</sup>/<sub>3</sub>

YIPPEE!

Let's try something a little harder! Simplify the expression.

$$9^{\frac{1}{2}}$$

Write in radical form!

What is the square root of 9?

$$\sqrt{9}$$

3!!!!

Now it's your turn!

Write Each expression in radical form

1)  $7^{\frac{1}{2}}$

2)  $4^{\frac{4}{3}}$

3)  $2^{\frac{5}{3}}$

4)  $7^{\frac{4}{3}}$

5)  $6^{\frac{3}{2}}$

6)  $2^{\frac{1}{6}}$

Write Each expression in Exponential form

7)  $(\sqrt{10})^3$

8)  $\sqrt[6]{2}$

9)  $(\sqrt[4]{2})^5$

10)  $(\sqrt[4]{5})^5$

11)  $\sqrt[3]{2}$

12)  $\sqrt[6]{10}$

# Simplify

27)  $1000000^{\frac{1}{6}}$

28)  $36^{\frac{3}{2}}$

29)  $(x^6)^{\frac{1}{2}}$

30)  $(9n^4)^{\frac{1}{2}}$

31)  $(64n^{12})^{-\frac{1}{6}}$

32)  $(81m^6)^{\frac{1}{2}}$

# Answer Key:

Once you have completed the problems, check your answers here.

$$1) 7^{\frac{1}{2}}$$

$$\sqrt{7}$$

$$2) 4^{\frac{4}{3}}$$

$$(\sqrt[3]{4})^4$$

$$3) 2^{\frac{5}{3}}$$

$$(\sqrt[3]{2})^5$$

$$4) 7^{\frac{4}{3}}$$

$$(\sqrt[3]{7})^4$$

$$5) 6^{\frac{3}{2}}$$

$$(\sqrt{6})^3$$

$$6) 2^{\frac{1}{6}}$$

$$\sqrt[6]{2}$$

## Answer Key:

Once you have completed the problems, check your answers here.

$$7) (\sqrt{10})^3$$

$$10^{\frac{3}{2}}$$

$$8) \sqrt[6]{2}$$

$$2^{\frac{1}{6}}$$

$$9) (\sqrt[4]{2})^5$$

$$2^{\frac{5}{4}}$$

$$10) (\sqrt[4]{5})^5$$

$$5^{\frac{5}{4}}$$

$$11) \sqrt[3]{2}$$

$$2^{\frac{1}{3}}$$

$$12) \sqrt[6]{10}$$

$$10^{\frac{1}{6}}$$

# Answer Key:

Once you have completed the problems, check your answers here.

$$27) 1000000^{\frac{1}{6}}$$

10

$$28) 36^{\frac{3}{2}}$$

216

$$29) (x^6)^{\frac{1}{2}}$$

$x^3$

$$30) (9n^4)^{\frac{1}{2}}$$

$3n^2$

$$31) (64n^{12})^{-\frac{1}{6}}$$

$\frac{1}{2n^2}$

$$32) (81m^6)^{\frac{1}{2}}$$

$9m^3$

# Additional Practice:

## Rational Exponents
