Algebra 1 S-1

May 8 , 2020

Algebra 1 S2
Lesson: May 7, 2020

Objective/Learning Target:

Students will find equivalent expressions using the quotient rule of exponents.

Brainstarter

"Remember
Take Notes"

Let's Get Started

[Watch Video 1:](#)

Remember that $x^a / x^n =$
 x^{a-n}

You just subtract the
exponents!

Your First Example

$$\frac{x^5}{x^3}$$

$$x^{5-3}$$

$$x^2$$

Remember
just
subtract

Your Second Example

$$\frac{-2x^4}{4x^2}$$

$$\frac{-2(x^{4-2})}{4}$$

$$-\frac{1}{2}x^2$$

That's right! group the coefficients together, divide them and then group the like bases and subtract

Let's try a little harder example...

$$\frac{6g^5n^6}{4gn}$$

$$\frac{6}{4} (g^{5-1})(n^{6-1})$$
$$\frac{3g^4n^5}{3}$$

It's the same thing,
group coefficients
and divide then
subtract exponents!

By Jove I think you've got it!

$$\frac{2w^{-4}}{3w^{-2}}$$

$$\frac{2w^{-4-2}}{3}$$

$$\frac{2w^{-6}}{3}$$

$$\frac{2}{3w^6}$$

You can't have a negative exponent, move it to the denominator

This example will be the ultimate test of your expertise! Private no assistance please!

$$\frac{14x^4y^7}{2x^5y^4}$$

$$\frac{14}{2} x^{4-5} y^{7-4}$$

$$7x^{-1}y^3$$

$$\frac{7y^3}{x}$$

yippee!

Now it's your turn!

1). $\frac{3r^3}{2r}$

3). $\frac{12yx^4}{10yx^8}$

2).

$$\frac{10p^4}{6p}$$

4).

$$\frac{5n^8}{20n^8}$$

Answer Key:

Once you have completed the problems, check your answers here.

1). $\frac{3r^3}{2r}$
 $\frac{3r^2}{2}$

2).

$$\frac{10p^4}{6p}$$
$$\frac{5p^3}{3}$$

3).

$$\frac{12yx^4}{10yx^8}$$

4).

$$\frac{6}{5x^4}$$

$$\frac{5n^8}{20n^8}$$

$$\frac{1}{4}$$

Additional Practice:
