## Partial Pressure and Rate of Effusion

## Calculation Practice

May 15th, 2020

## Chemistry

Lesson: May 15th 2020

### Objective/Learning Target:

The learner will be able to relate the total pressure of a mixture of gases to the partial pressure of the component gases. Describe how the molar mass of a gas affects the rates of diffusion and effusion.

## Bell Ringer

1. What is diffusion?
2. What is effusion?

## Bell Ringer Answers:

1. The tendency of molecules to move from a region of higher concentration to areas of lower concentration.
2. The process of gas escaping through a tiny hole.

Today our focus is on practicing using Dalton's Law of Partial Pressures and Graham's Law of Effusion

Dalton's Law: 
$$P_{\text{total}} = P_1 + P_2 + P_3 + \dots$$

Graham's Law: 
$$\frac{\text{Rate}_A}{\text{Rate}_B} = \sqrt{\frac{\text{molar mass}_B}{\text{molar mass}_A}}$$

If you need refreshers on how to use these equations, watch the following videos:

- [-Organic Chem Tutor Dalton's Law of Partial Pressure Problems & Examples](#)
- [-Organic Chem Tutor Graham's Law of Effusion Practice Problems and Examples](#)

1. Air contains oxygen, nitrogen, carbon dioxide, and trace amounts of other gases. What is the partial pressure of oxygen ( $P_{O_2}$ ) at 101.30 kPa of total pressure if the partial pressures of nitrogen, carbon dioxide, and other gases are 79.10 kPa, 0.040 kPa, and 0.94 kPa respectively?
2. What is the rate of effusion if nitrogen has a molar mass of 28.0 g and helium has a molar mass of 4.0 g?

- Determine the total pressure of a gas mixture that contains oxygen, nitrogen, and helium. The partial pressures are  $P_{\text{O}_2} = 20.0 \text{ kPa}$ ,  $P_{\text{N}_2} = 46.7 \text{ kPa}$ , and  $P_{\text{He}} = 26.7 \text{ kPa}$ .
- A gas mixture containing oxygen, nitrogen, and carbon dioxide has a total pressure of  $32.9 \text{ kPa}$ . If  $P_{\text{O}_2} = 6.6 \text{ kPa}$  and  $P_{\text{N}_2} = 23.0 \text{ kPa}$ , what is  $P_{\text{CO}_2}$ ?
- Which gas effuses faster: hydrogen or chlorine? How much faster?

# Answers

1.  $P_{\text{total}} = P_1 + P_2 + P_3 \dots$

$$P_{\text{total}} = P_{\text{O}_2} + P_{\text{N}_2} + P_{\text{CO}_2} + P_{\text{other}}$$

$$101.30 \text{ kPa} = P_{\text{O}_2} + 79.10 \text{ kPa} + 0.040 \text{ kPa} + 0.94 \text{ kPa}$$

$$-80.08 \text{ kPa}$$

$$-80.08 \text{ kPa}$$

$$21.22 \text{ kPa} = P_{\text{O}_2}$$

2.

$$\frac{\text{Rate}_A}{\text{Rate}_B} = \sqrt{\frac{\text{molar mass}_B}{\text{molar mass}_A}}$$

$$\frac{\text{Rate}_{\text{He}}}{\text{Rate}_{\text{N}_2}} = \sqrt{\frac{\text{molar mass}_{\text{N}_2}}{\text{molar mass}_{\text{He}}}} = \sqrt{\frac{28.0 \text{ g}}{4.0 \text{ g}}} = \sqrt{7.0} = 2.7$$

# Answers

$$3. P_{\text{total}} = P_1 + P_2 + P_3 \dots$$

$$P_{\text{total}} = P_{\text{O}_2} + P_{\text{N}_2} + P_{\text{He}}$$

$$P_{\text{total}} = 20.0 \text{ kPa} + 46.7 \text{ kPa} + 26.7 \text{ kPa}$$

$$P_{\text{total}} = 93.4 \text{ kPa}$$

$$4. P_{\text{total}} = P_1 + P_2 + P_3 \dots$$

$$P_{\text{total}} = P_{\text{O}_2} + P_{\text{N}_2} + P_{\text{CO}_2}$$

$$32.9 \text{ kPa} = 6.6 \text{ kPa} + 23.0 \text{ kPa} + P_{\text{CO}_2}$$

$$-29.6 \text{ kPa} \qquad -29.6 \text{ kPa}$$

$$3.3 \text{ kPa} = P_{\text{CO}_2}$$

## Answers

5. Hydrogen Gas; 5.9307 times faster

$$\frac{\text{Rate}_A}{\text{Rate}_B} = \sqrt{\frac{\text{molar mass}_B}{\text{molar mass}_A}}$$

$$\frac{\text{Rate}_{\text{H}_2}}{\text{Rate}_{\text{Cl}_2}} = \sqrt{\frac{\text{molar mass}_{\text{Cl}_2}}{\text{molar mass}_{\text{H}_2}}} = \sqrt{\frac{70.906 \text{ g}}{2.0159 \text{ g}}} = \sqrt{35.1734} = 5.9307$$
