$$

## Physics

## Determining "G": May 11,2020

## Objective/Learning Target:

Students will use a computer simulation and graphing techniques to determine the gravitational constant " $G$ "

## Quick Review \#1

The planet and its moon gravitationally attract each other. Rank the forces of attraction between each pair, from greatest to least.

## Quick Review \#1 Answer

The forces of attraction ranked from greatest to least.

$$
B=C, A, D
$$

## Quick Review \#2

Suppose that an apple at the top of a tree is pulled by Earth's gravity with a force of 1 N . If the tree were twice as tall, would the force of gravity on the apple be only $1 / 4$ as strong?

## Quick Review \#2

No, because the twice-as-tall apple tree is not twice as far from Earth's center. The taller tree would have to have a height equal to the radius of Earth ( 6370 km ) before the weight of the apple would reduce to $1 / 4 \mathrm{~N}$.

Before its weight decreases by $1 \%$, an apple or any object must be raised 32 km -nearly four times the height of Mt. Everest, the tallest mountain in the world. So as a practical matter we disregard the effects of everyday
 changes in elevation.

Newton's Law of Gravitation and "G"

## Introduction

You will use a computer simulation today to reinforce your ideas of Newton's Universal Law of Gravitation and to determine "G". Since this is "inquiry based", you're not supposed to know everything going in, but learn as we walk through the lesson. You must read the following slides carefully. Let's get started!

## Newton's Law of Gravitation and "G"

The simulation will let you vary distances and masses, and then shows the forces between them. Leaving " $G$ " as the only unknown.

The force of gravity between two normal-sized objects is much too small to measure even in most college laboratories, hence this is a good simulation.

$$
F=G \frac{m M}{r^{2}}
$$

Newton's Law of Gravitation and "G"
Newton's Law of Gravitation sets up nicely for us to use a linear equation to find " $G$ ".

## Newton's Law of Gravitation and "G"

- 

moependence school District

1. Vary the masses and distance between the masses, record all your data along with the gravitational force that is given in the Sim. Record all sig figs.
2. Do this for ten different scenarios recording each in the data table.
Make sure to use the entire range possible for all the parameters.

The ruler is movable so you can get the distances more exactly. This will be your least accurate measurement. Make it as carefully as you can.

| $M_{1}(\mathrm{~kg})$ | $\mathrm{M}_{2}(\mathrm{~kg})$ | $r(m)$ | $F(N)$ | $X=\frac{M_{1} M_{2}}{r^{2}}$ |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |

## Newton's Law of Gravitation and "G"

3. Calculate " $X$ " using the the following portion of the gas law and record in the table.

$$
X=\frac{M_{1} M_{2}}{r^{2}}
$$

| $M_{1}(\mathrm{~kg})$ | $M_{2}(\mathrm{~kg})$ | $r(m)$ | $F(N)$ | $X=\frac{M_{1} M_{2}}{r^{2}}$ |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |

## Newton's Law of Gravitation and "G"

4. Plot a F vs. " $X$ " graph and calculate the slope.
5. The slope is your experimental value for " $G$ ". Calculate the percent error.

Actual value:
$\mathrm{G}=6.673 \times 10^{-11} \mathrm{Nm}^{2} / \mathrm{kg}^{2}$

## Simulation example answers

| M1 (kg) | M2 (kg) | $r(m)$ | $F(N)$ | $X=\frac{M_{1} M_{2}}{r^{2}}$ |
| :---: | :---: | :---: | :---: | :---: |
| 100 | 400 | 4.0 | $1.66852 \times 10^{-7}$ | 2500 |
| 200 | 400 | 4.0 | $3.33704 \times 10^{-7}$ | 5000 |
| 800 | 400 | 4.0 | $1.334816 \times 10^{-6}$ | 20000 |
| 800 | 1000 | 2.4 | $9.269556 \times 10^{-6}$ | 138888.9 |
| 800 | 1000 | 6.0 | $1.483129 \times 10^{-6}$ | 22222.22 |
| 800 | 1000 | 9.6 | $5.79347 \times 10^{-7}$ | 8680.556 |
| 10 | 10 | 9.6 | $7.24 \times 10^{-11}$ | 1.085069 |
| 50 | 500 | 7.0 | $3.4051 \times 10^{-8}$ | 510.2041 |
| 60 | 120 | 8.0 | $7.508 \times 10^{-9}$ | 112.5 |
| 350 | 80 | 8.9 | $2.3592 \times 10^{-8}$ | 353.4907 |

Force vs X

## Simulation example answers

4. Slope $=\frac{\text { Rise }}{\text { Run }}=\frac{\left(y_{2}-y_{1}\right)}{\left(x_{2}-x_{1}\right)}$

$$
\begin{aligned}
& =\frac{\left(1.66853 \times 10^{-7}-7.508 \times 10^{-9}\right) \mathrm{N}}{(2500-112.5) \mathrm{kg}^{2} / \mathrm{m}^{2}} \\
& =6.67409424 \times 10^{-11} \mathrm{Nm}^{2} / \mathrm{kg}^{2}
\end{aligned}
$$

$$
\text { Slope }=\frac{\text { Rise }}{\text { Run }}
$$

Run
5. \%err $=\underline{(\text { experimental value }- \text { accepted value) }} \times 100 \%$ accepted value

$$
=\frac{6.674 \times 10^{-11}-6.673 \times 10^{-11}}{6.673 \times 10^{-11}} \times 100 \%=0.1 \%
$$

## Additional Practice

Return to the simulation and practice using Newton's Law of Gravitation by picking mass values and a distance and calculating the Force between them using the formula and checking your answer with the simulation.

## $F=G \underline{m M}$ $r^{2}$
