HS Computer Science Essential
Lesson: April 13, 2020

Objective/Learning Target:
Python Data Types Part 1 of 2

Let's Get Started:

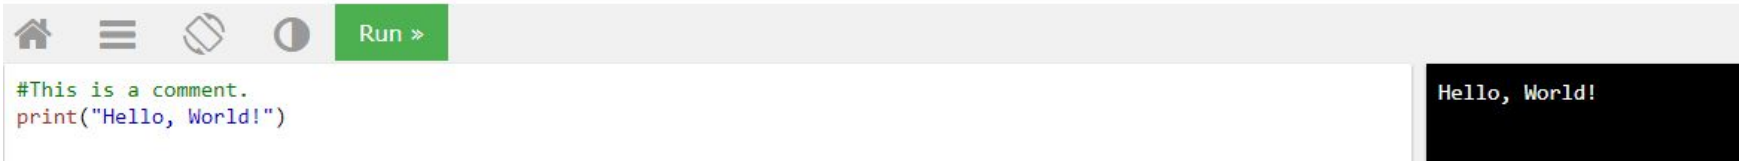
In programming, data type is an important concept. Variables can store data of different types, and different types can do different things too. Explore the Python tutorial at:

https://www.w3schools.com/python/python_datatypes.asp

Work through the Python Data Types subcategory.

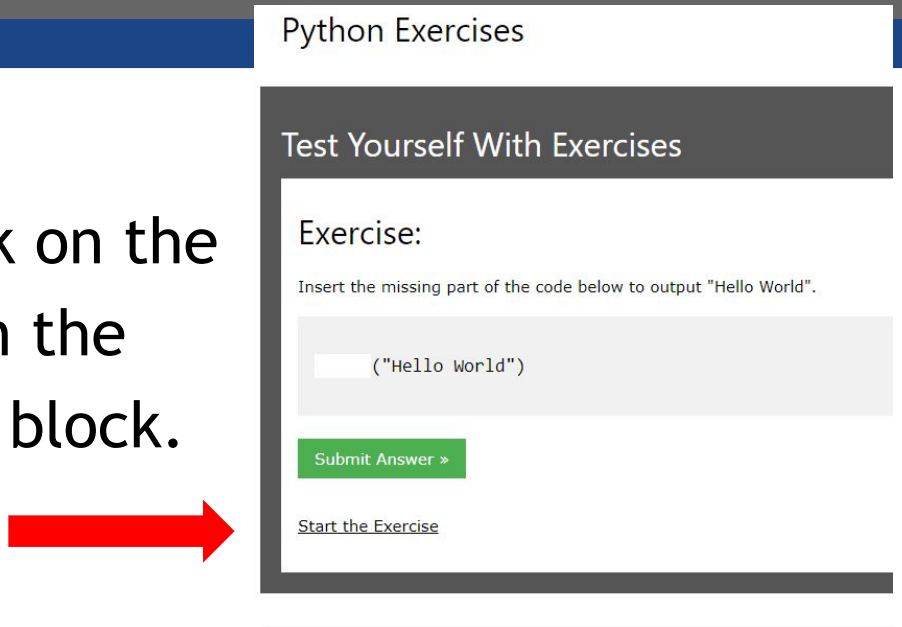
Be certain to try each example that is provided

Clicking on the “Try it Yourself” buttons will open a new screen that will allow you to practice what you have learned in the tutorial. The screen on the left will allow you to enter your code. Click on “Run” to see the output of your program on the right side of the screen.



Practice:

At the end of this section, click on the “Start the Exercise” link within the “Test Yourself With Exercises” block.



Complete Exercises 5-7 under PYTHON Data Types and check your answers after running your programs.

Additional Practice:

Click on the links below to get additional practice and to check your understanding!

Python Data Types: Booleans
