Bridges from Readworks

Bridges have been around for many years! Bridges allow humans to get across rivers or roads.

Many years ago, people used rope bridges. Now, most bridges are made of steel or concrete. Steel is a strong type of metal. Concrete is a mix of stone, water, and sand. Some concrete bridges can hold cars or trains.

One famous bridge is the Brooklyn Bridge. This bridge is wide enough for people to walk and bike over it.

One type of bridge is an arch bridge. It looks like a half-circle. Arch bridges can support a lot of weight.

You can see bridges in cities or small towns. You can even see them in the countryside, over rivers or streams. Do you have a bridge close to where you live?
